Client
Gateway + admission
Cache co-ordinator
Registry + provider adapter
JSON request + credential
Gateway: authenticate; rate check; resolve scope and route
authorized lookup
MISS / BYPASS + reason
Gateway: recheck principal; count admitted miss; enforce deadline
[admission rejected] return error without provider call
configured route request
selected route + event stream
Gateway: validate normal completion and bounded nonempty answer; [provider error] return error without cache write
[normal completion] classify response and route compatibility
[eligible] scoped write
storage outcome
[no-store / BYPASS / fallback] skip stor-age; [write failure] retain completed answer
JSON MISS follower may share leader result; BYPASS generates directly
answer + outcome metadata
