Client
Gateway
Cache co-ordinator + local models
Redis
request + credential
Gateway: authenticate, rate check, resolve scope and provider profile
authorized lookup
scoped exact read
no current entry
Coordinator: embed incoming question locally
filtered top-k search
candidates + scores
loop [bounded candidates]: structural checks and local NLI; collect ACCEPT / VERIFY / REJECT
Coordinator: check conflicts, limits and deadline before selection
selected-entry re-read
current question + answer
touch recency; not TTL
HIT + decision trace
Gateway: recheck principal before returning HIT
answer + HIT metadata
